

Successful businesses depend on reliable access to real-time information and web-based internet applications. With Bluebird Network's Dedicated Internet Access (DIA) Service, you benefit from symmetrical carrier-grade access to the internet over Bluebird Network's broadband backbone at the fastest speeds possible. DIA provides you with simple, manageable and scalable high-capacity bandwidth choices, as well as multiple access options.

The Bluebird Network DIA service is routed across our highly resilient fully meshed IP/MPLS backbone that is capable of event recovery with sub 50 ms restoral times. We understand the needs and concerns of our customers and realize internet access is essential to business operations. Bluebird Network has over 135 fully redundant carrier class Points of Presence (POPs) established throughout Missouri, Illinois and Iowa. With more POPs, you have a shorter access loop to our meshed backbone for lower latency and higher reliability of services.

Customers requiring Internet service can be connected using copper or fiber interfaces with a variety of access port speeds. The bandwidth assigned to DIA service is dedicated to each customer on the network. DIA service is symmetrical for efficient two way applications. Protection options can be enabled to provide internet access redundancy, enabling you to meet the mission critical needs of your business.

Bluebird Network leverages its vast fiber optic network to provide high bandwidth services to carriers throughout the Midwest United States. Our carrier grade network offers secure, reliable, and scalable connections, ensuring customers stay in the forefront of today's increasingly digital world. With over 135 Points of Presence (POP) sites spanning the Midwest including major cities like Chicago, St. Louis, Kansas City, Springfield (Illinois and Missouri), Tulsa, Peoria, Rockford, Bloomington, Normal and the Quad Cities, you can be sure that your data will travel fast and secure, whether it's across the street or across multiple states. Bluebird Network offers data center, collocation gigabit transport and gigabit dedicated internet services through the Bluebird Underground, our data center housed in a solid limestone cave.

Features

- Copper interfaces- port speeds of 100/1000 Mbps
- Fiber interface- port speeds of 1/10/100 Gbps
- Configurable service speeds below port rate (ensures you only pay for the bandwidth you need)
- Scalable to meet bandwidth demands
- Network and fiber route protection options available
Manage Network Interface Device

Benefits

- Your connection to the Internet is dedicated and not shared with other customers
- 24x7 customer support with proactive monitoring to assure continuous end-to-end availability of your DIA connection
- Redundant and reliable IP network infrastructure to ensure availability and high quality of Service
- Extensive peering arrangements
- Multi-Protocol Label Switching (MPLS) provides fast reroute and core redundancy

BLUEBIRD NETWORK

Because success is all about good connections
