

JOIN THE NEWEST IXP IN MISSOURI: SPRINGIX

Lower Latency

Save Costs

Better Bandwidth

What is SpringIX?

SpringIX is a free internet exchange point created and operating in the Bluebird Underground Data Center in Springfield, Missouri. It provides a physical ethernet switched infrastructure to internet related business companies and ISPs to exchange IP traffic.

SpringIX members have FREE access to content from other members on the exchange and KCIX internet exchange customers in Kansas City, Missouri.

Benefits

- Exchange traffic at no charge
- Have access to SpringIX control panel
- Utilize a Dedicated Ethernet port for peering
- Private Peering Available

Bi- & Multi-Lateral Peering

Establish directing peering with other SpringIX members and route servers.

Private VLAN

Connect with another SpringIX member via a private network.

Remote Peering

Utilizing our direct connections to other IXPs, to connect to them directly.

BELOW GROUND ABOVE STANDARDS

Why is peering at SpringIX free?

SpringIX has been created to help Internet development and traffic optimization in southern Missouri and Illinois. With no recurring charge, members can easily exchange traffic and optimize their network performances. SpringIX wants to provide companies an alternative peering network for performance and redundancy reasons.

Is it really free of charge to peer at SpringIX?

There is a nominal non-recurring cross-connect fee of \$150 to configure a customer's SpringIX connection. There are no recurring charges.

Who are SpringIX members? Who can join?

Most members are internet service providers, application service providers or telecom operators. Any legal entity with a valid Autonomous System Number (ASN) and has 1/3 of a rack of space at the Bluebird Underground Data Center is welcome to join.

Peering without an IXP

The Bluebird Underground Data Center

Located 85' feet underground, Bluebird Underground Data Center offers unmatched safety, security and reliability for your colocation needs. The underground advantage protects customer data from natural and manmade disasters by placing our critical systems underground and built to N+1 standards. Bluebird owns the fiber, meaning your connection to the outside world is never subject to someone else's transport or network.
